

HARVESTER 6: 2 MINUTE DATA ASSESSMENT

Description

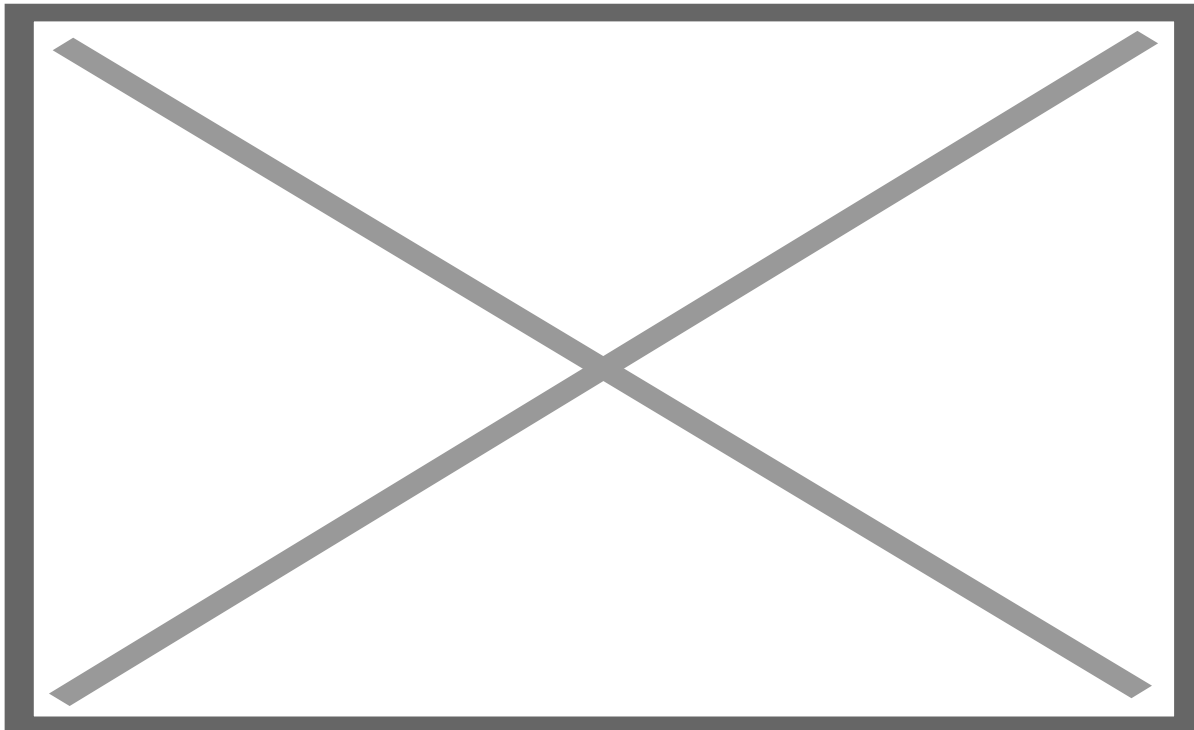

New Harvester Agent reduces network traffic while performing faster collections and blazing fast data assessment!

This is the 2nd of 8 sneak peeks into the features in our upcoming Harvester 6.0 release.

SNEAK PEEK #2 – QUICK DATA SNAPSHOTS WITH NEW HARVESTER AGENT

The agent is a program that runs in the background on client PCs and waits for instructions from Harvester Server. Common E-Discovery collection requests include creating file inventories for data assessment, **keyword search files and emails**, and complete backups for selected items.

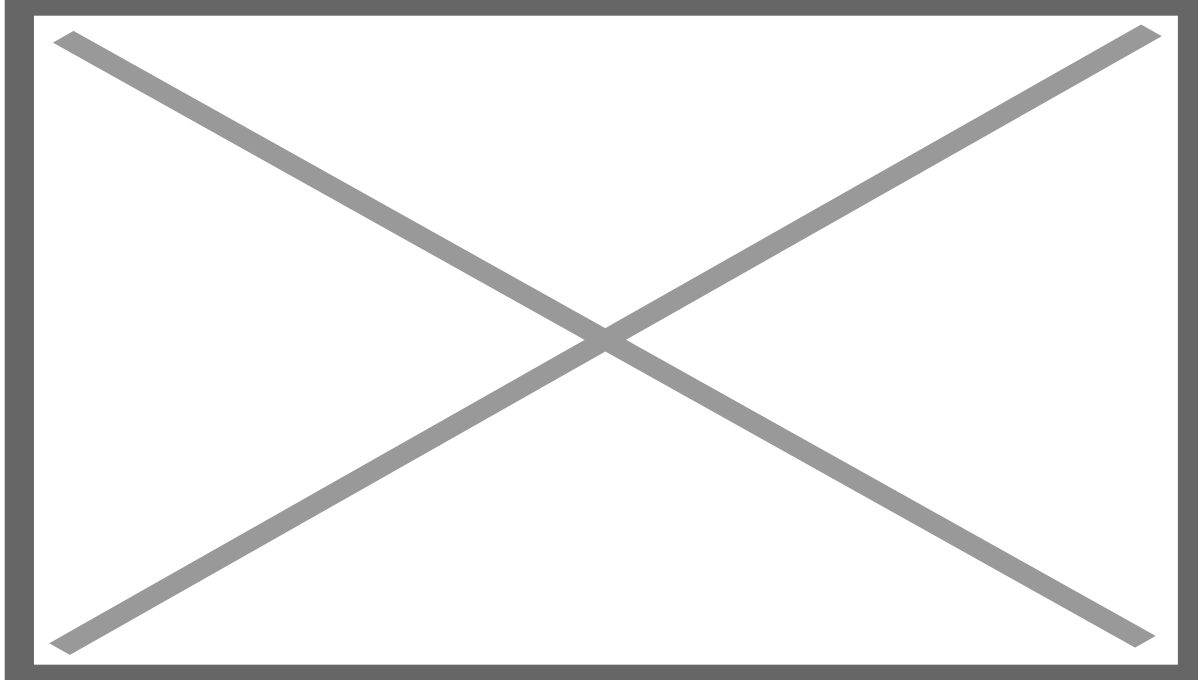

REMOTE SYSTEM SNAPSHOTS

Our new Harvester Agent can also produce **file lists and data assessment reports for client PCs in less than 2 minutes and search network file shares at more than 30+ terabytes an hour!** Viper, Harvesters multi-threaded copy engine, quickly collects files to their native format or encrypted containers.

Our new Harvester Agent allows users to:

- Quickly create file inventory Snapshots of remote client systems and network file shares
- Select relevant collection items from data assessment reports
- Optionally, send collected items to Harvester Server processing engine
- Remotely install, update, monitor and remove agents

SNAPSHOT STATUS

With our Harvester Agent, deploying, updating and removal is easy and includes the power of an E-Discovery culling engine. You can run jobs in stealth mode, link to popular legal hold applications and optionally prompt users for relevant file and email locations.
