Ellwood Evidence Saves More Than $200K While Elevating Compliance Capabilities

Description

Read this case study to learn how Ellwood Evidence utilized Harvester to:

- Monitor a database between 300-400 terabytes
- Process roughly 40 gigs of data per hour to quickly determine damage
- Generate a dtSearch index automatically for better quality
- Run hundreds of thousands of search terms against the generated indices in a cost-effective manner

â€œWe can use this tool all over the place. Itâ€™s not just oriented to enterprise or centralized environments â€" we can leverage our licenses across both Harvester Enterprise and Portable. So we can prepare something and send it off to a custodian, itâ€™ll run on their laptop, they can ship it back to us, and then we can confirm with the logs that everything ran correctly. It allows us to have hands-off, non-invasive but still defensible collections, even at a small scale.â€ Theyâ€™ve also started using Harvesterâ€™s deduping and de-NISTing capabilities, cutting their capture sizes in half.
