Pinpoint Labsâ€™ Harvester 5.0 Expands Support to 64-Bit Outlook, Gmail, and More

Description

(Murray, Nebraska) JULY 05, 2016

Pinpoint Labs, an industry leader in providing defensible e-Discovery software to law firms, service bureaus, and corporate companies, announces the release of the latest update to itsâ€™ Harvester Product Family.

As more corporations and government agencies move to cloud-based email and document storage platforms, it quickly became clear that clients desired to have enhanced web-based email eDiscovery software.

â€œThe release of Harvester 5.0 Portable and Harvester 5.0 Server not only closely coincides with Pinpoint Labsâ€™ 10-year anniversary, it represents significant expansion to address what is, for many, the most common source of eDiscovery information- email and attachments,â€ said Jon Rowe, CEO and President of Pinpoint Labs.

By integrating IMAP sources into Harvester, the user can process OSTâ€™s and PSTâ€™s without installing Outlook. As a result, the average processing speed of Harvester 5.0 has increased 200-300%.

- Harvester searches and collects data from Gmail, Hotmail, Outlook.com, Yahoo, and Office 365
- Multi- threaded email and file processing engine allows users to simultaneously collect from the cloud and the custodianâ€™s hardware
- Harvesterâ€™s re-designed ESI â€œEasy Vaultâ€ provides 32-bit and 64-bit support
- Extensive keyword search- including word search, date range, dedupe, deNIST, and file type extension
- Automatically resume jobs

Keeping with best practices for preserving and collecting e-Discovery data, Pinpoint Labs designed Harvester 5.0 to easily and defensibly gather multiple files and folders, with minimal impact on client systems. Clients appreciate the robust all-in-one tool for itsâ€™ affordable licensing fees and portability.

About Pinpoint Labs:

Pinpoint Labs develops e-Discovery collection software- providing defensibility to legal and information technology professionals seeking to collect discoverable information from laptops, desktops, file servers, webbased email platforms, Office 365, and SharePoint sites.
