HARVESTER 6: MAC NATIVE E-DISCOVERY COLLECTIONS

Description

New Harvester macOS agent provides data assessment and collection from Mac clients

This is the 3rd of 8 sneak peeks into the features in our upcoming Harvester 6.0 release.

SNEAK PEEK #3 â?? COLLECT FROM ALL YOUR PCâ??S WITH HARVESTER SERVER

Many E-Discovery collection requests include Mac computers. Harvester Server 6.0

includes a new macOS agent that can be installed on client PCâ??s and controlled from Harvester Server.

The agent is a program that runs in the background and waits for instructions from Harvester Server. Common E-Discovery collection requests include creating file inventories for data assessment, filtering by file type and date range, and complete backups for selected items.

MAC SNAPSHOT FILE BROWSER

macOS e-discovery collections

Users can use Snapshot data assessment reports from macOS systems to create targeted and defensible E-Discovery collections. Once items are collected, they can be automatically sent to Harvester Serverâ??s E-Discovery processing engine.

If you need a portable native macOS eDiscovery collection software, check out Pinpoint CrossCopy. CrossCopy runs from an external drive or the host computer. CrossCopy provides 100% file verification, preserves file timestamps and metadata like other Pinpoint products, and creates a chain of custody verification logs.
