

HARVESTER 6: NEW PROJECT TEMPLATES

Description

New project templates simplify training and job setup

This is the 5th of 8 sneak peeks into the features in our upcoming Harvester 6.0 release.

JOB SETTINGS #1 – “COPY ONLY AND DATA ASSESSMENT”

Users only see options related to items to copy, where they will be copied, date range and file extensions. Fast enumeration is used by default when using the Copy Only template. Fast enumeration is a multi-threaded file inventory process that produces popular data assessment reports for local PCs and network shares at a rate of **20-30 Terabytes an hour**.

The screenshot displays the Pinpoint Labs application window. At the top, there is a menu bar with 'Job', 'Tools', and 'Help'. Below this is a toolbar with icons for 'Open...', 'Save', 'Save As...', 'Copy Only', 'Common Filters', 'All Options', and 'Resu this'. The main window has a 'Menu' tab selected, showing 'Job Profiles' and 'History'. The 'History' tab is active, displaying a list of 'Previous Jobs (29)'. The list includes job IDs and names, with '20Mar19-145058 - FAST ENUME...' highlighted. On the right, there is a 'Summary' tab and a list of extensions with checkboxes, including 'Execu', 'Extens', 'dll', 'exe', 'sys', 'so', 'con', 'fon', 'drv', 'on', 'vb', 'Email', and 'pst'.

Preserve - Collect - Discover

Due to the multi-terabyte data sets that are frequently encountered, Harvester's fast enumeration process makes quick work of knowing what's on a target computer or network resource. Users can filter items that match a production request before collecting data.

JOB SETTINGS #2 – COMMON FILTERS

Out of all of the Harvester filtering options, users can access, keywords and deduping are the most common. Harvester includes these options in the common filters template so users can quickly enter their criteria and be ready to go.

Harvester Portable and Server have been the go-to E-Discovery collection applications for many corporate, legal IT and computer forensic professionals for the past decade. Working with our clients we have added many useful features that allow Harvester to be the most versatile application of its kind.

The screenshot displays the Pinpoint Labs application interface. At the top, there is a navigation bar with a logo (scales of justice) and three tabs: "Job", "Tools", and "Help". Below this is a toolbar with icons for "New", "Open...", "Save", "Save As...", "Copy Only", "Common Filters", and "All Options". The "File" and "View" categories are indicated below the icons.

The main window is divided into two panes. The left pane, titled "Menu", contains a "Job Profiles" section with a "History" button. Below this, a list titled "All Jobs (10)" is shown. The list includes the following items:

- ACME File Collection + (with a "T" icon)
- ACME LS Email JDoe (with a magnifying glass icon and a "T" icon)
- ACME0002 (with a "T" icon)
- ACME0002 ALL +
- ACME0002 MARKETING+
- FAST ENUM 3
- FAST ENUMERATION (with a "T" icon)
- FAST ENUMERATION + (with a magnifying glass icon)
- Wilson_CopyKW (with a "T" icon)
- Wilson_EmailKW (with a magnifying glass icon and a "T" icon)

The right pane, titled "Overview", shows a "Keywords" section with a search bar and a list of search terms. The search bar contains the text "Search" and the list of terms includes "You", "one", "per li", "and", "file c", "your", and "terms".

By grouping features specific to the most commonly used jobs, the workflow is more streamlined but users can still easily access all of Harvester's features as they have in the past. If you would like to see the new job profiles, fast enumeration or any of our other Harvester 6 Sneak Peek features contact [Pinpoint Labs](#) to schedule a demonstration.
