Pinpoint Labs and StreemView Partner to Support Mobile and Modern Data Investigations

Description

Pinpoint Labs has announced a new partnership with StreemView that connects CrossCopy Enterprise (CCE) and CrossCopy Mobile (CCM) with StreemViewâ??s cloud-based ECA and investigation platform. The collaboration enables organizations to collect, transfer, and analyze mobile and modern communication data in a single, defensible workflow.

The partnership addresses one of the most pressing challenges in digital investigations: managing and reviewing growing volumes of mobile and chat data. With support for Microsoft Teams, Slack, Signal, and mobile devices, the combined technologies simplify how organizations handle complex communication data while maintaining integrity, consistency, and chain of custody throughout the process.

â??Our platform was designed from the ground up to handle the unique structure of mobile and collaborative data. Traditional review tools often break conversations into arbitrary chunks, losing critical context and breaking the searchability of key data sources,â?• said Michael Schubert, CEO of StreemView. â??This integration with Pinpoint Labs is a natural fit. It ensures that the high-integrity data collected by CrossCopy flows directly into an environment built to interrogate it natively, allowing legal teams to see the full picture and find key insights faster.â?•

Jon Rowe, CEO of Pinpoint Labs, added, â??Mobile and modern data continues to play a defining role in modern investigations, yet it remains one of the most difficult sources to collect defensibly. Through this integration, StreemView users can access Mobile and modern data collections that retain a full chain of custody and metadata integrity from device to review, ensuring accuracy and reliability in every matter.â?•

As organizations rely more heavily on mobile communication and collaboration tools, legal and investigative teams face increasing pressure to capture, preserve, and interpret these sources efficiently. The Pinpoint Labs and StreemView partnership supports that need by combining defensible mobile data collection with StreemViewâ??s cloud-based investigation platform, offering a connected and efficient solution for modern data management.
