
Pinpoint Labs Partners With Page One on Forensic Data Collection

Description

Modern matters don't wait for neat data. Mobile devices, cloud platforms, collaboration tools, and distributed workforces have made collections more complex while raising the bar for defensibility.

That's why Pinpoint Labs has partnered with [Page One](#), a Relativity Gold Partner with a long track record supporting [eDiscovery](#) services nationwide. The focus of this partnership is simple: help teams move from collection to downstream review with fewer bottlenecks, stronger documentation, and more consistency, especially when mobile and cloud data are involved.

When collections are handled defensibly from the start, everything downstream gets easier: less rework, fewer gaps, and cleaner handoffs into review workflows (including Relativity environments where speed to review and privilege decisions can matter a lot).

What this partnership supports

- Defensible collections across modern sources (mobile, cloud, and enterprise)
- Stronger preservation of metadata and chain of custody from acquisition through handoff
- More efficient coordination between collection and review teams, helping reduce friction in time-sensitive matters
- A smoother path into Relativity-based workflows, including faster readiness for aiR-enabled privilege review where applicable

Additional information on the partnership, including its scope and focus, is available in the [full press release](#).
