

## Pinpoint Labs SharePoint Collector Release Adds Office 365 support to Its Popular E-Discovery Collection Software

### Description

**(Murray, Nebraska) MARCH 25, 2015**

With the release of SharePoint Collector 3.0, users have the ability to collect documents and list items from SharePoint sites located within Microsoft Office 365 sites and other related sites. By introducing an additional security measure, claims-based authentication (CBA), information will only be accessible via select 3<sup>rd</sup> party applications designed to handle advanced protocols.

SharePoint Collector users now have an additional login option when creating new jobs to select claims based authentication and enter the additional credentials. Once login is successful SharePoint Collector handles the additional communications seamlessly. Due to Microsoft Office 365 increasing popularity discoverable information within the web portal will become commonplace.

In keeping with best practices for preserving and collecting E-Discovery data, Pinpoint Labs designed SharePoint Collector 3.0 to be run without needing access to the physical SharePoint server or requiring software installation. When the client project is finished, all critical data is neatly organized and forensically sound, keeping the chain of custody intact.

“Since releasing SharePoint Collector 3 years ago we have had the opportunity to assist clients with a wide variety of SharePoint site setups. After noticing a significant increase in the number of users encountering Office 365 we knew we needed to take the time to add the functionality. One of our clients mentioned that they haven’t been able to locate any other collection tools that incorporate claims based authentication. I’m very proud of our engineers and what they have accomplished.”- Jon Rowe, President and Co-Founder of Pinpoint Labs

For more information on how SharePoint Collector 3.0 can simplify and dramatically speed up your E-Discovery collections, please visit the SharePoint Collector [Product Page](#).

Pinpoint Labs, a software and litigation support firm, announced the release of the latest update to SharePoint Collector.
