

When is a Computer Forensic Investigation Needed? (2 of 2)

Description

In my previous post, I identified several primary differences between computer forensic investigations and electronic discovery processing. Next, Iâ€™d like to identify some general case categories and tasks that involve a computer forensic investigator.

Case Categories:

- ✧ Employment disputes
- ✧ Misuse of company computer involving pornography, gambling, blackmail and fraud
- ✧ Embezzlement
- ✧ Breach of contract
- ✧ Software licensing
- ✧ Intellectual property theft
- ✧ Insurance fraud
- ✧ Sexual harassment

Typical Tasks:

- ✧ Recovering deleted files and emails
- ✧ Internet activity analysis
- ✧ Cell phone and smart phone analysis
- ✧ Metadata analysis
- ✧ Providing results, recommendations, and action plan

Even if a civil or criminal investigation doesnâ€™t fall within these case categories, you may still need to involve a computer forensic investigator. Why? Because it is no secret that computers are used as a primary source for communication, work product, and research. The listed tasks could apply to investigating almost any suspect involved in a civil or criminal law suit.
